

Style F144

the newest generation
designed specifically for wall mounted uplighting

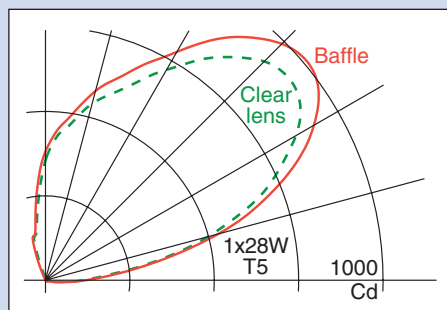

elliptipar
...there is no equal™

Style 144 Xtra small enclosed semi-elliptical uplight

T5 fluorescent

... engineered for economical uplighting of low, narrow spaces where sightlines are limited.

- Shallow profile is ADA compliant
- Integral ballast with programmed start
- Through wiring with optional quick connect
- Optional dimming, emergency battery
- Easy installation
- T5 lamps for long life, great color and low energy use

Even with its shallow profile, the asymmetric reflector projects light across the ceiling. The rotated reflector minimizes light spilled below horizontal.

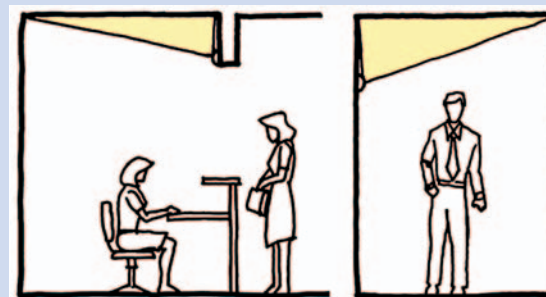

Standard radial baffle in matte gray ... blends into the housing when lighted ... provides shielding when the primary sightline is along the length. Ideal for office corridors, reception areas and behind dropped soffits.

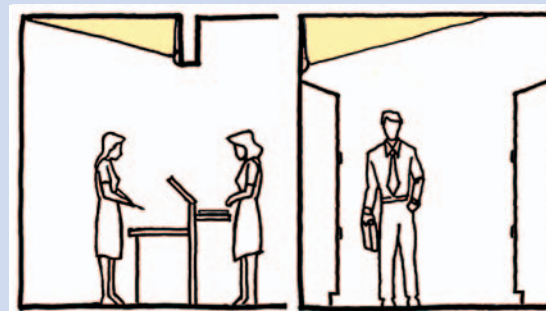

Optional clear acrylic lens ... creates an enclosure for added safety and easy maintenance. Great for school and hospital corridors, examining rooms and food preparation areas.
