F307
in coves

Architect: BCW Architects
Store Design: King Retail Solutions
Engineer: MP&P Engineering
Photography: MHB PHOTO-GRAF

Tasting Room, Peaked Ceiling Area:

Plan: 22' wide x 30' long
Ceiling: 11'-4" a.f.f. to cove; 12'-5" a.f.f. to lower edges; 16'-3" a.f.f. to ridge
Lighting: (14) F307-T155-S-00-1-00-J (nominal 4' dual-reflector Xtra Small T5HO), 7 units end-to-end, both sides
Estimated illuminance: 93 fcai on wood ceiling; 18 fcai on workplane
Estimated power density: 2.6 W/sf (cove lighting only)

elliptipar Styles F307, F305

Calgary Co-op is one of the largest retail cooperatives in North America, with 438,000+ members and annual sales of over \$1 billion. The Co-op offers its members opportunities for patronage returns on a broad range of products, from food and wine to travel packages.

As one of the Co-op's wine tasting centres, the Crowfoot store features a tasting room and a private locker service — wines chosen by the store's sommelier are matched to members' preferences and stored for them. Food pairing advice, wine reviews and in-store tasting events add to the centre's appeal.

Uplighting for the beamed wood ceiling of the tasting room is provided by **elliptipar Style F307** cove lighting. The fixtures feature dual reflectors, which can be aimed independently for maximum versatility.

elliptipar Style F305 fixtures with a single T5HO reflector light the vaulted ceiling at the entrance from coves above the clerestory. The even wash of light creates a welcoming glow to greet customers.

The **F305** and **F307** are both Cradle to Cradle Certified™, designating environmental safety and reusability in component materials.

Cradle to Cradle Certified™ is a certification mark licensed by the Cradle to Cradle Products Innovation Institute.

Style F307

Each row of reflectors on the **Style F307** can be joined and aimed together when used in continuous runs. Locking set screws secure the aiming positions.

Style F305

The compact profile of the Xtra Small **Style F305** (2-5/8" high x 5-5/8" wide) lends itself to smaller cove details.
